CANDIDATE NAME						
CENTRE NUMBER				CANDIDATE NUMBER		
MATHEMATICS						9709/52
Paper 5 Mechai	nics 2 (M2)			0	ctober/Nove	ember 2018
					1 hour	15 minutes
Candidates answ	ver on the 0	Question Pa	aper.			
Additional Mater	ials: Li	st of Formu	lae (MF9)			

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

Where a numerical value for the acceleration due to gravity is needed, use 10 m s<sup>-2</sup>.

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

The total number of marks for this paper is 50.

	ontal ground. Find the speed of $B$ when the path of $B$ makes an angle of $20^{\circ}$ above the horizontal ground.

Given instead that the rectangle <i>DEFG</i> is a square with edges of length <i>r</i> m, state with a rewhether the centre of mass of the lamina lies within the square or the quarter-circle.	

A rough horizontal rod AB of length 0.45 m rotates with constant angular velocity 6 rad s<sup>-1</sup> about a vertical axis through A. A small ring R of mass 0.2 kg can slide on the rod. A particle P of mass 0.1 kg is attached to the mid-point of a light inextensible string of length 0.6 m. One end of the string is attached to R and the other end of the string is attached to R, with angle  $RPB = 60^{\circ}$  (see diagram). R and R move in horizontal circles as the system rotates. R is in limiting equilibrium.

(i)	Show that the tension in the portion $PR$ of the string is 1.66 N, correct to 3 significant figures. [5]
