

Cambridge International Examinations

Cambridge International Advanced Subsidiary Level

CANDIDATE NAME			
CENTRE NUMBER		CANDIDATE NUMBER	
MATHEMATICS			9709/21
Paper 2 Pure Mathe	matics 2 (P2)		May/June 2017
			1 hour 15 minutes
Candidates answer of	n the Question Paper.		
Additional Materials:	List of Formulae (MF9)		

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all the questions.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

The total number of marks for this paper is 50.

4 The sequence of values given by the iterative formula

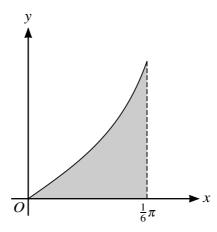

$$x_{n+1} = \frac{2x_n^2 + x_n + 9}{(x_n + 1)^2},$$

with $x_1 = 2$, converges to α .

(i)	Find the value of α correct to 2 decimal places, giving the result of each iteration to 4 decimplaces.	nal [3]

6

The diagram shows the curve $y = \tan 2x$ for $0 \le x \le \frac{1}{6}\pi$. The shaded region is bounded by the curve and the lines $x = \frac{1}{6}\pi$ and y = 0.

(i)	Use the trapezium rule with two intervals to find an approximation to the area of the shaded region, giving your answer correct to 3 significant figures. [3]

8

The diagram shows the curve with equation

$$y = 3x^2 \ln(\frac{1}{6}x).$$

The curve crosses the x-axis at the point P and has a minimum point M.

Find the gradient of the curve at the point P .	[5]
